Analyze the cumulative revenue generated over time

It shows the growth trend of the business throughout the year.

Cumulative revenue isn't just about what we made today; it's about the velocity of our success. It transforms thousands of individual transactions into a single, clear story of business expansion.

```
57      # Time-Series Analysis
58      •  select date,
59          sum(revenue) over (order by date) as CUM_revenue
60      from (
61      select
62      orders.date,
63      sum(order_details.quantity * pizzas.price) AS revenue
64      from order_details
65      join pizzas on order_details.pizza_id = pizzas.pizza_id
66      join orders on orders.order_id = order_details.order_id
67      group by orders.date
68      ) as sales;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

	date	CUM_revenue
▶	2015-01-01	2713.85
	2015-01-02	5445.75
	2015-01-03	8108.15
	2015-01-04	9863.60

Marketing Strategy

The Healthy Pivot

The bottom 5 revenue earners are almost all Veggie/Spinach-based (Brie Carre, Green Garden, Spinach Supreme). These pizzas aren't pulling their weight. Instead of removing them, try a "Guilt-Free Weekdays" rebranding campaign.

38% of your orders consist of only one pizza.

Create a "Perfect Pair" deal (2 Pizzas + 1 Side). By incentivizing the 38% of single-pizza buyers to add just one more item, you significantly increase the profit margin per delivery/transaction.

**Group the orders by date
and calculate the average
number of pizzas ordered
per day**

```
110 # Group the orders by date and calculate the average number of pizzas ordered
111 • select
112     round(Avg(quantity),0) AS avg_pizzas_ordered_per_day
113 from
114     (select orders.date, sum(order_details.quantity) AS quantity
115     from orders
116     join order_details on orders.order_id = order_details.order_id
117     group by orders.date) AS order_quantity;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: |

avg_pizzas_ordered_per_day
138

**The top 3 most
ordered pizza types
based on revenue.**

```
20 # Determine the top 3 most ordered pizza types based on revenue.
21 • SELECT
22     pizza_types.name,
23     SUM(order_details.quantity * pizzas.price) AS revenue
24 FROM
25     pizza_types
26     JOIN
27     pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
28     JOIN
29     order_details ON order_details.pizza_id = pizzas.pizza_id
30 GROUP BY pizza_types.name
31 ORDER BY revenue DESC
32 LIMIT 3;
33
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows

name	revenue
The Thai Chicken Pizza	43434.25
The Barbecue Chicken Pizza	42768.00
The California Chicken Pizza	41409.50

Key Business Performance Metrics (KPIs)

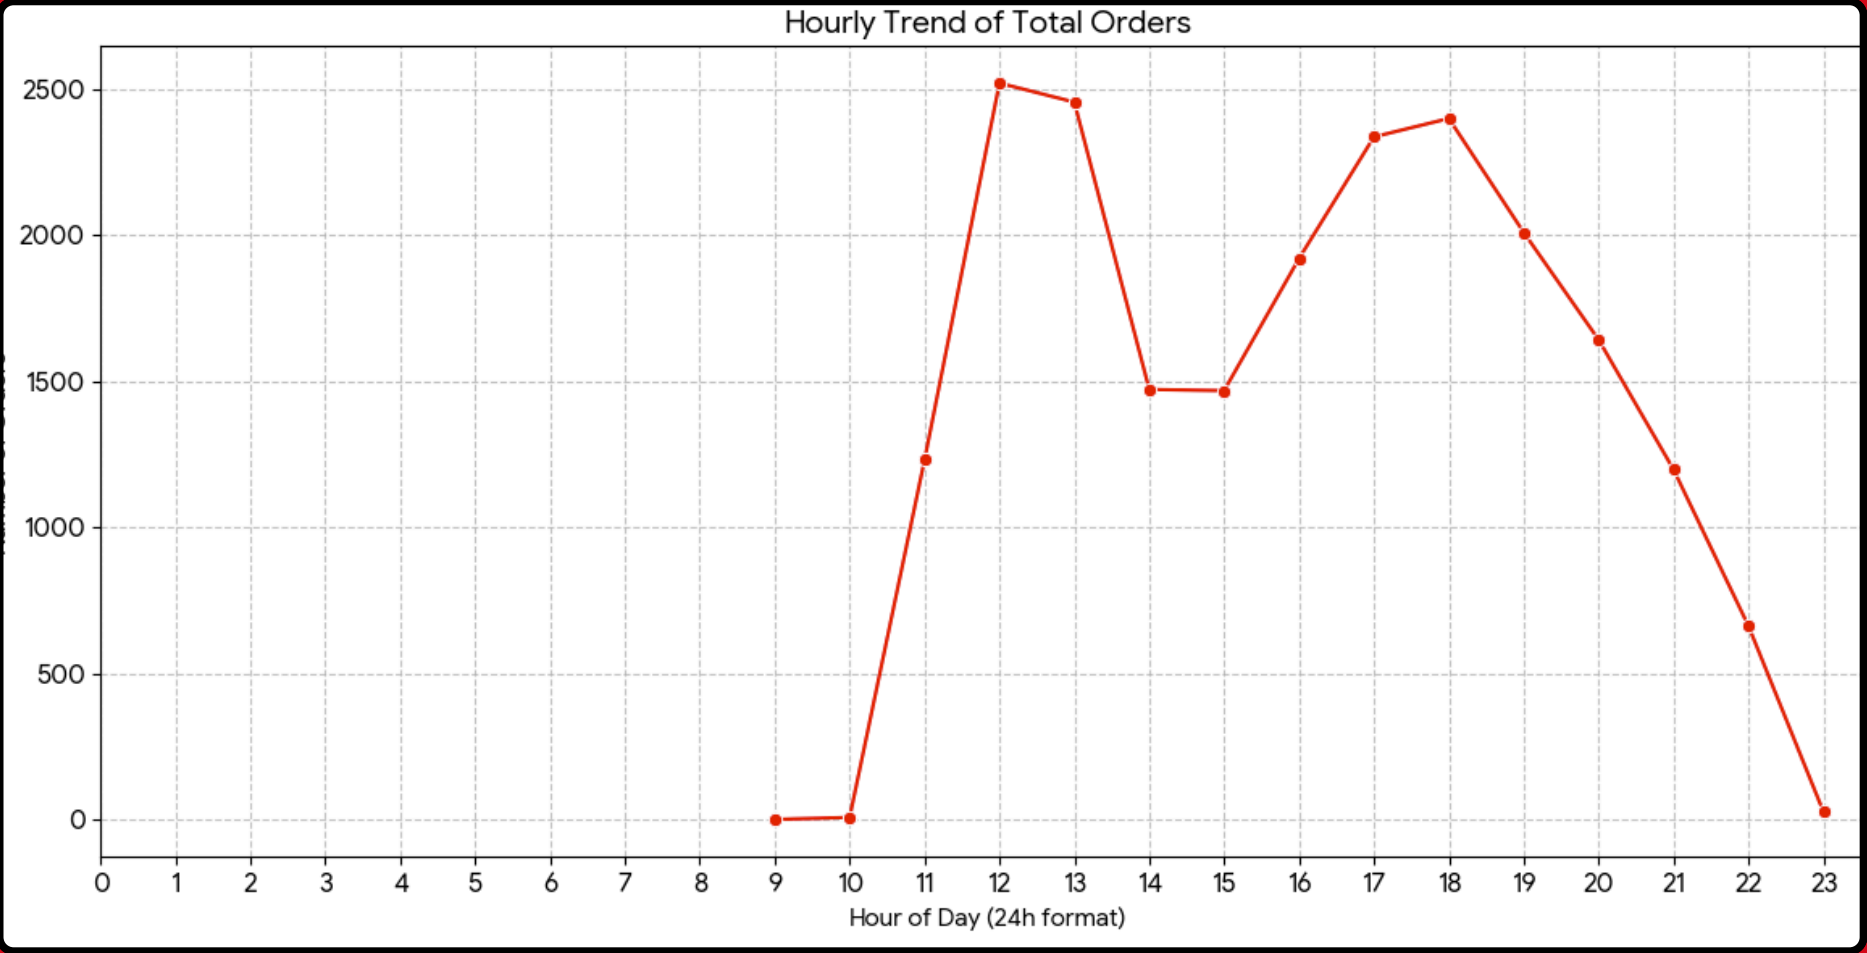

Total Revenue:
\$817,860.05

Total Orders Processed:
\$21,350

Average Order Value (AOV):
\$38.31

Growth Projections

Clearly visualizes the "Lunch Rush" (12 PM) and "Dinner Peak" (6 PM). This is a great slide to talk about "Operational Efficiency."
